

SKIN WAND PRO & VIKTORIA DÉANN

BioActive Peptide Nano-Infusion Protocol

VIKTORIA DÉANN
PEPTIDE COSMECEUTICALS

SUMMARY This advanced peptide and nano-infusion protocol is ideal for clients seeking non-invasive but scientifically validated results. By combining biomimetic peptide technology, controlled nano-channeling, and LED therapy, this treatment delivers high-impact rejuvenation with zero downtime—positioning the esthetician as an innovator in clinical aesthetics.

Clinical Indications

This treatment is ideal for clients experiencing:

- Mild to moderate skin laxity (due to intrinsic or extrinsic aging)
- Fine lines and rhytides
- Uneven skin tone or discoloration (post-inflammatory hyperpigmentation, sun damage, etc.)
- Uneven texture

Contraindications

Skin Conditions & Application Restrictions

- Do not apply to areas with open wounds, lesions, or active sores.
- Avoid using on skin that is sunburned, excessively dry, cracked, or experiencing rashes.
- Refrain from applying to open comedones, active breakouts, or cystic acne
- Not suitable for individuals with compromised skin barriers or ongoing inflammatory skin conditions.
- This treatment is not recommended for clients with known sensitivities to any of the ingredients listed in products being used

Pre-Treatment & Post-Treatment Care

- Refrain from using retinols, retinals, scrubs, enzyme masks, or polishing products for at least 5 days before and 3 after this treatment.
- Waxing or sugaring should be avoided 5 days before and up to 7 days following the procedure.

Medical Considerations

- If your client is pregnant, breastfeeding, undergoing chemotherapy, or managing an autoimmune condition, a physician's clearance is recommended prior to treatment.
- Be sure to cross-reference ingredients with any prescription or over-the-counter medications using a Physicians' Desk Reference or equivalent source to rule out interactions.
- Discontinue use immediately if irritation or any adverse reactions occur.

Post-Treatment Notes

Sunscreen: Apply a physical/mineral SPF 30+

Chemical sunscreens are discouraged immediately post-treatment due to potential sensitization.

Ideal Appointment Time: Late afternoon/evening to avoid direct UV exposure for maximum amount of time post-treatment.

No exercise for 24 hours.

Home Care Protocol Recommendation:

Recommend the VDA/SWP Collab Kit:

.15 mm Skin Wand Pro tips for home maintenance (safe and effective for non-clinical use)

Multi-targeted peptides included to continue skin regeneration between sessions

These kits simplify peptide selection and create an effortless retail opportunity with excellent client compliance and ongoing revenue.

Treatment Series Recommendations

Perform every 7–10 days as part of a corrective series (up to 6 sessions).

Do not exceed one 5% Lactic & Collagen exfoliation per week to avoid over-exfoliation.

Standalone Session Efficacy

Visible improvement in texture and tone occurs within 24–48 hours, making this an ideal pre-event glow treatment.

Devices and Products Utilized:

Skin Wand Pro with .25mm Nano Tip

Viktoria DéAnn Purifying Cleanser

Viktoria DéAnn Balancing Cleanser

Viktoria DéAnn 5% Lactic and Collagen Serum

Viktoria DéAnn Pepti-Lift Serum

Viktoria DéAnn Pepti-Tone Serum

Viktoria DéAnn Pepti-Repair Serum

Viktoria DéAnn Hyaluronic Treatment Serums in LOW, MEDIUM and HIGH

Any Additional peptides per client needs

Viktoria DéAnn VioPure HydraFirm Eye Cream

Viktoria DéAnn VioPure Restorative Cream or Nourishing Cream, per client needs

SKIN WAND PRO & VIKTORIA DÉANN

BioActive Peptide Nano-Infusion Protocol

VIKTORIA DÉANN
PEPTIDE COSMECEUTICALS

Step 1: Double Cleanse Pre-Treatment Prep

Time: 5 minutes

1. First Cleanse: Purifying Cleanser
2. Rationale: Removing surface residue
3. Second Cleanse: Balancing Cleanser
4. Rationale: A second cleanse to prep the skin for peptide absorption

Step 2: Serum-Based Exfoliation

Time: 8 minutes

- Apply 5% Lactic Acid + Collagen for 7 minutes.
- Rationale: Lactic acid gently dissolves desmosomal bonds while hydrating the skin, and the collagen peptide reinforces the skin barrier during exfoliation. This self-neutralizing blend prepares the skin for maximum peptide reception without triggering inflammation.

Step 3: Precision Peptide Layering

Time: ~10 minutes (varies by selection)

- Apply 4-5 targeted Viktoría DéAnn bioactive serums, including the décollete if desired (lower SWP setting for neck and décollete)
- Recommended serums:
 - Lift: Immediate firming effect on lax skin
 - Tone: Rejuvenates skin tone and vibrancy
 - Repair: Stimulates dermal repair and reduces inflammation

Rationale: These peptides deliver precise signals to fibroblasts. Fibroblasts promote neocollagenesis, improving elasticity, and targeting photodamage at a molecular level.

Layering Order:

1. Lift
2. Tone
3. Repair
4. Low and/or Medium molecular weight hyaluronic (Lightest molecular weight to heaviest)

Allow 2 minute absorption time between layers.

Step 4: Skin Wand Pro Nano-Channeling (refer to manufacturer's manual)

Time: 15 minutes

Device: Skin Wand Pro

Cartridge: .25 mm Nano Tip (Professional Use Only)

Intensity: Level 1-2 (face and neck)

Technique: Smooth, overlapping circular motions

Glide: Medium or High MW Hyaluronic Treatment Serum

- Work in sections, applying serum just prior to passing the Skin Wand Pro over the section.
- Treat all sections of the face and décollete, adjusting pressure, motion, and speed for delicate areas. (EYE AREA ALWAYS LEVEL 1)
- Rationale: The nano-tips create uniform micro-channels allowing deeper peptide penetration—ideal for sensitive clients and minimal downtime.
- (NOTE- tingling, prickly sensation is normal and expected during and after Skin Wand Pro session. Slight erythema also expected.)

Note - avoid any keloid scar tissue

Step 5: LED Relaxation & Rejuvenation

Time: 15 minutes

- Strategic application of skin concern specific peptides and place client under Red LED Light Therapy Panel (630–660nm).
- Rationale: Red LED enhances cellular ATP production and reduces inflammation.

Step 6: Treatment Completion & Barrier Reinforcement

- Eye Care: Apply VioPure HydraFirm Eye Cream
- Moisturizer: Choose appropriate VioPure Moisturizer based on skin type and post-treatment hydration needs - Nourishing or Restorative

Rationale: These finishing products seal in actives, calm the skin, and support barrier function during the recovery phase. The eye cream is rich in firming peptides and hydration factors.
